Inclusive Design User Group Cards

Directions: 1. Create user group by disability or requirements.
2. Add accommodations/considerations. 3. Consider Overlaps.

Nutrition Finder

Requirements:

Finding databases / information containing nutritional information. This can be calories, proteins, vitamins, and serving size for different foods and meals.:

Accomodations/considerations:
This member is looking for raw information about nutrition. It is up to the file parser to sort that information and ensure it makes sense.

File Parser

Requirements:
Sorts through information found by both the recipe and nutrition finder and ensures the information is useable by the AI chatbot.

Accomodations/considerations:

They do not have to find the original data being used, this is provided to them constantly from the recipe and nutrition finder.

Recipe Finder

Requirements:
Finding databases / information containing actual recipes and data on what ingredients make up particular foods.

Accomodations/considerations:
This member is looking for raw information only about recipes. They do not have to sort the information or find nutrition.

Training and Troubleshooting

Requirements:
This member takes the data being inputted into the chatbot and edits its instructions to ensure that it can understand the information and respond to user's accordingly. They also ensure it works correctly and within the bounds of the project.

Accomodations/considerations:
This member is not affiliated with the actual functioning of the database, they only ensure that the bot responds according to the files given.
