Meal Planner Chatbot

Using this information given by user, the AI goes through data to find the best food options for what our user may be looking for and submits recipe/ingredient lists to the user.	The user is anyone who would like to try some new recipes that they may be interested in. The User wants a good meal with ingredients and step by step directions on how to make the meal.	The link to the Gemini Gem is Meal Planner
What does your AI Chatbot do?	Who is your user? What do they want?	How do they find your bot?
They prompt it with any preferences or needs using the chat box tool.	The user learns how to make a new meal and gets ideas for meals.	They can tell others about it if their recipes worked out, and if they enjoyed trying something new.
How do they interact with the bot?	What do they learn?	What do they tell others about their experience?
